FCC Acts on Two Spectrum Fronts

As we go to press, the FCC has announced the launch of a proceeding to allocate 255 MHz of additional spectrum in the 5.7 GHz band for unlicensed use. See Page 2 for more details.

In addition, the FCC has adopted a Report and Order and Further Notice of Proposed Rulemaking in the long-pending proceeding on "secondary markets," intended to make under-used licensed spectrum more easily available to those who need it. See Page 7 for more details.
